### MEP UTILITY CUPBOARDS

Our MEP Utility Cupboards offer a complete packaged solution for the residential market. Each unit comes fully fitted, pre-tested and ready to install on-site, complete with HIU and/or CIU, MVHR and all associated piping, manifolds and electricals installed to specification.

Our MEP Utility Cupboards provide one of the highest quality products suitable for residential applications with mechanical & electrical elements recessed and flush mounted where applicable, minimising ingress within the internal cupboard space and providing an appropriate finish for modern apartments.

### COMPLETE PREFABRICATED PACKAGE

Our factory built MEP Utility Cupboards are an ideal solution for the challenges that come with large residential developments. They are designed to meet spatial constraints, vastly reduce project programme with mass offsite production and reduce project co-ordination across multiple trade services, with a complete, bespoke designed offsite manufactured solution.
